| Math Expressions Common Core <br> Unit 1: Multiplication and Division with 0-5, 9, and 10 <br> September/October | - I can understand the meaning of multiplication (i.e. that $5 \times 7$ means 5 groups of 7). <br> - I can understand the meaning of division (i.e. that $56 / 8$ means that if I have 56 objects I can divide them equally into 8 groups). <br> - I can to solve multiplication and division word problems within 100 by using drawings and equations. <br> - I can find the unknown number in a multiplication or division problem (i.e., 8 $\times ?=48,5=-\div 3,6 \times 6=$ ?.) <br> - I can use properties of operations to help me multiply and divide. <br> - I can understand that a division problem is an unknown-factor problem. <br> - I can fluently multiply within 100 , using strategies. <br> - I can fluently divide within 100 , using strategies. <br> - I can say or write all multiplication facts o-5s, 9 s and 10 from memory. <br> - I can find and explain patterns in the addition and multiplication tables. <br> - I can multiply the side lengths of a rectangle to find the area. <br> - I can multiply the side lengths of a rectangle to find the area in a real world problem. <br> - I can use tiling to show that the area of a rectangle with side lengths a and $\mathrm{b}+$ c is the sum of $\mathrm{a} \times \mathrm{b}$ and $\mathrm{a} \times \mathrm{c}$. <br> - I can use an area model to show the distributive property. | $\begin{aligned} & \text { 3.OA.1 } \\ & \text { 3.OA.2 } \\ & \text { 3.OA.3 } \\ & \text { 3.OA.4 } \\ & \text { 3.OA.5 } \\ & \text { 3.OA.6 } \\ & \text { 3.OA.7 } \\ & \text { 3.OA.9 } \\ & \text { 3.MD.7b } \\ & \text { 3.MD.7c } \end{aligned}$ | Delta Math Screener Unit 1 Quick Quizzes <br> Unit 1 Assessment |

Math Expressions
Common Core
Unit 2: Multiplication and Division with 6s, 7s, 8s, and Multiplying with Multiples of 10

October/November

- I can understand the meaning of multiplication (i.e. that $5 \times 7$ means 5 groups of 7).
- I can understand the meaning of division (i.e. that $56 / 8$ means that if I have 56 objects I can divide them equally into 8 groups).
- I can to solve multiplication and division word problems within 100 by using drawings and equations.
- I can find the unknown number in a multiplication or division problem (i.e., 8 $\left.\times ?=48,5=\_\div 3,6 \times 6=?.\right)$
- I can use properties of operations to help me multiply and divide.
- I can understand that a division problem is an unknown-factor problem.
- I can fluently multiply within 100 , using strategies.
- I can fluently divide within 100 , using strategies.
- I can say or write all multiplication fact though 9s from memory.
- I can solve 2-step word problems with $\mathrm{x}, /,+$, and -.
- I can write a problem using an equation with a letter standing for the unknown.
- I can tell if an answer is reasonable using mental math or estimation.
- I can find and explain patterns in the addition and multiplication tables.
- I can multiply 1-digit whole numbers by multiples of 10 in the range 10-90 using strategies based on place value and properties of operations.
- I can understand that a square with a side length 1 unit, has "one square unit" of area.
- I can use a square unit for measure area.
- I can find the area and perimeter of figures by counting.
- I can find the area of a rectangle by covering it in square tiles and show that the area is the same as it would be if I multiplied the length of two sides (base and height).
- I can multiply the side lengths of a rectangle to find the area.
- I can multiply the side lengths of a rectangle to find the area in a real world problem.

## Math Expressions <br> Common Core

Unit 6: Polygons,
Perimeter, and Area

January/February

- I can see that all 2-dimensional shapes have area.
- I can understand that a square with a side length 1 unit, has "one square unit" of area.
- I can use a square unit for measure area.
- I can find the area and perimeter of figures by counting.
- I can solve problems involving area and perimeter by counting the units.
- I can find the area of a rectangle by covering it in square tiles and show that the area is the same as it would be if I multiplied the length of two sides (base and height).
- I can multiply the side lengths of a rectangle to find the area.
- I can multiply the side lengths of a rectangle to find the area in a real world problem.
- I can use tiling to show that the area of a rectangle with side lengths a and $b+$ c is the sum of $\mathrm{a} \times \mathrm{b}$ and $\mathrm{a} \times \mathrm{c}$.
- I can use an area model to show the distributive property.
- I can find the area of rectangular shapes by breaking them into several smaller rectangles, finding the area of each smaller rectangle, and adding the areas together.
- I can find the perimeter of polygons in math problems and real world problems.
- I can find the perimeter when I know the side lengths.
- I can find an unknown length of the side of a polygon, given the lengths of other sides and perimeter.
- I can show rectangles with the same perimeter but different areas.
- I can show rectangles with the same area but a different perimeter. I can understand that shapes in different categories may share attributes (e.g., squares, rectangles and rhombuses having four sides).
- I can understand that one category may contain many different shapes with a shared attribute (e.g., quadrilaterals).
- I can recognize rhombuses, rectangles, and squares as quadrilaterals.
- I can draw examples of quadrilaterals that are not rhombuses, rectangles, or squares.
- I can divide a shape into parts that have equal areas.
- I can tell the area of each part using a unit fraction

| Math Expressions Common Core Unit 7: Explore Fractions March | - I can understand that a fraction is part of a whole. <br> - I can understand that a fraction is a number on the number line. <br> - I can show fractions on a number line. <br> - I can put unit fractions on a number line by breaking the number line into equal parts. <br> - I can put fractions on a number line by breaking the number line into equal parts. <br> - I can tell 2 fractions are equivalent if they are the same size <br> - I can tell 2 fractions are equivalent if they are at the same point on a number line. <br> - I can find and write equivalent fractions. <br> - I can explain why fractions are equivalent using a fraction model. <br> - I can write whole numbers as fractions. <br> - I can tell when a fraction is equivalent to a whole number. <br> - I can compare two fractions with the same numerator. <br> - I can compare two fractions with the same denominator. <br> - I can explain why one fraction is $<,>,=$ to another using a fraction model. <br> - I can divide a shape into parts that have equal areas. <br> - I can tell the area of each part using a unit fraction. | $\begin{aligned} & \text { 3.NF. } 1 \\ & \text { 3.NF. } 2 \\ & \text { 3.NF.2a } \\ & \text { 3.NF.2b } \\ & \text { 3.NF.3a } \\ & \text { 3.NF.3b } \\ & \text { 3.NF.3c } \\ & \text { 3.NF.3d } \\ & \text { 3.G.2 } \end{aligned}$ | Unit 7 Quick Quizzes <br> Unit 7 Assessment |
| :---: | :---: | :---: | :---: |
| Math Expressions Common Core <br> Unit 4: Multi-digit Addition and Subtraction April | - I can solve 2-step word problems with $\mathrm{x}, /,+$, and -. <br> - I can write a problem using an equation with a letter standing for the unknown. <br> - I can tell if an answer is reasonable using mental math or estimation. <br> - I can find and explain patterns in the addition and multiplication tables. <br> - I can use place value to round whole numbers to the nearest 10 or 100. <br> - I can fluently add within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction. <br> - I can fluently subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction. | $\begin{aligned} & \text { 3.OA. } 8 \\ & \text { 3.OA. } 9 \\ & \text { 3.NBT. } 1 \\ & \text { 3.NBT. } 2 \end{aligned}$ | Unit 4 Quick Quizzes <br> Unit 4 Assessment |
| Math Expressions Common Core <br> Unit 5: Write Equations to Solve Word Problems <br> May | - I can to solve multiplication and division word problems within 100 by using drawings and equations. <br> - I can find the unknown number in a multiplication or division problem (i.e., 8 $\times ?=48,5=\_\div 3,6 \times 6=$ ?.) <br> - I can solve 2-step word problems with $\mathrm{x}, /,+$, and -. <br> - I can write a problem using an equation with a letter standing for the unknown. <br> - I can tell if an answer is reasonable using mental math or estimation. <br> - I can use place value to round whole numbers to the nearest 10 or 100. <br> - I can fluently add within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction. <br> - I can fluently subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction. | $\begin{aligned} & \text { 3.OA. } 3 \\ & \text { 3.OA. } 4 \\ & \text { 3.OA.8 } \\ & \text { 3.NBT.1 } \\ & \text { 3.NBT.2 } \end{aligned}$ | Delta Math Screener <br> Unit 5 Quick Quizzes <br> Unit 5 Assessment |
